

## Innovation cluster and think tank

Transdisciplinary project design

- on a **scientific** basis
- with **economic** objectives
- with **policy** involvement

For an **effective** and **efficient** shaping of the **energy transition** and for **strengthening** the economic and export **power of our members.**

## The House of Energy stands for a holistic energy transition

For the House of Energy, the energy transition represents a fundamental transformation from a fossil fuel to a **regenerative and greenhouse gas-neutral energy supply**.

The associated **technological change must be considered holistically**. This means thinking beyond the **energy sector: industry, information technology, finance, housing and mobility** as well as **politics and citizens** must be involved in this process.

All aspects of sustainability – environmental compatibility, economic efficiency and acceptance – must be taken into account. Inventions have to evolve into innovations.

## The House of Energy networks

The House of Energy brings together **the expertise of those who are designing the energy system transformation**. Active players across multiple disciplines create a network that aims to take the energy transition forwards **efficiently and effectively**.

## The House of Energy initiates and coordinates

The House of Energy **drives change, recommends suitable partners** for your projects, can **access specific expertise** and **knows where innovations are emerging**.

It **provides advice** for the development of your project ideas with regard to **innovation, feasibility and relevance**, finds **suitable partners and funding programmes** and supports you in the **application process, implementation, coordination and communication**.

## The House of Energy empowers

The House of Energy supports the innovation network with **vocational trainings** in the field of energy transition. It **promotes and organises professional knowledge transfer** by means of **workshops, dialogues, seminars and conferences**.

## The House of Energy promotes

The House of Energy **supports the energy transition end to end: from the development of ideas and project initiation to the research support**, we are partners for policymakers, start-ups, companies, energy suppliers, universities and research institutions.

## The House of Energy communicates

The House of Energy **creates publicity** and offers you as a member a **platform for the presentation of project results** as well as **innovations** and facilitates events for you.
